

# File Archive Solution (FAS)

Extend the capabilities of EAS to the entire enterprise file system

Modern organizations are fueled by information. Whether contained in corporate email systems, or stored in a network file systems the sheer volume of this information continues to escalate dramatically every year. At the same time, the legal significance of the information is higher than ever before, with regulations requiring increasing diligence in its management and retention. Meanwhile, knowledge workers require quick and efficient access to corporate information on a continual basis simply to carry out their day-to-day functions. All of which creates an enormous challenge for corporate information departments.

To solve this growing problem, ZANTAZ has extended its industry-leading Exchange Archive Solution (EAS) to include file systems. Building on the proven distributed architecture, and benefiting from the industry's fastest archival performance, FAS allows organizations to proactively and efficiently manage their corporate information assets.

## Take Control of all of your corporate information

Organizations can extend their email archive with ZANTAZ FAS, an extension to the industry leading Exchange Archive Solution that allows organizations to manage both email messages and NTFS file systems using a single archive server. Large enterprises with multiple geographical locations can take advantage of ZANTAZ' inherently scalable architecture, which is specifically engineered to address massive, distributed information management requirements.

FAS provides a uniquely flexible and powerful policy engine that enables organizations to archive files according to their own specific strategies without impacting end-users. FAS administrators can configure the archival and exemption of files according to such policy parameters as:

### Key Benefits of FAS

- **Optimization of your file system storage** - The compression and single instance storage of archived files provides a dramatic reduction in the storage space required.
- **Flexibility to adapt to your unique archival requirements** - ZANTAZ offers the industry's most versatile policy engine with the richest set of parameters to drive your archival strategy.
- **An email and file system infrastructure that is built to scale** - The distributed architecture is engineered to support large geographically distributed organizations.
- **Instant and Transparent File Retrieval** - Archived files remain visible to users, and can be retrieved with a simple double-click.
- **Sophisticated Searching** - Users can rapidly find the information they need using EAS Search.
- **Foundation for corporate information processes** - Helps enable critical business processes such as litigation support, regulatory compliance and corporate governance.

### Substantial storage savings and flexibility with FAS

FAS delivers tremendous storage savings by selectively and proactively moving files from expensive corporate servers to more efficient online, near-line or offline storage devices. The "Single Instance Storage" feature ensures that only one copy of each unique file is archived, and ZANTAZ' highly efficient compression technology increases the dramatic storage savings even further.

But the dramatic savings of storage space is only the beginning. With the ability to simultaneously support multiple target devices of virtually any kind, FAS enables the intelligent optimization of enterprise-wide storage strategies. Organizations can utilize primary, secondary and tertiary archival devices depending upon file attributes, anticipated usage and corporate policy. With features such as automatic load leveling, disaster recovery and full support for EAS Storage and Retention Manager (EAS-STORM), FAS enables organizations to effectively and efficiently manage their file systems throughout the entire information lifecycle.

### Access to your information when you need it

End-users can instantly and transparently retrieve archived files without administrator intervention or support. Furthermore, the powerful EAS Search product allows users to quickly find the files they need using a sophisticated search interface. FAS automatically synchronizes archive permissions with network permissions to ensure that the existing corporate file security is reinforced, and the original file format and location information are maintained ensuring archived files can be completely and transparently restored.
